## **DATA VALIDATION FINDINGS SUMMARY**

### **I. General Package:**

A data package compliant for Level IV data validation was received from the laboratory. No resubmission was necessary.

### **II. Volatile Organics (EPA TO-15):**

Laboratory results for this method were reported in both UG/M3 and PPBV units.

Recovery of 1,2-Dichloroethane in the laboratory control sample analysis associated with the analyses of samples from this SDG exceeded upper acceptance criteria. Samples reported as non-detect for this analyte were not affected. The 1,2-Dichloroethane concentrations of associated field samples were qualified as estimate with positive bias (J+).

All other quality assurance and quality control (QA/QC) components presented by the laboratory satisfied method and data review acceptance criteria.

### **III. Helium (EPA Method 3C):**

Laboratory results for this method were reported in PPMV units.

All quality assurance and quality control (QA/QC) components presented by the laboratory satisfied method and data review acceptance criteria. No data qualifications were necessary.

**DATA QUALIFIER REFERENCE**

Qualifier	Definition
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified: the associated numerical value is the approximate concentration of the analyte in the sample.
J-	The result is an estimated quantity, but the result may be biased low.
J+	The result is an estimated quantity, but the result may be biased high.
UJ	The analyte was not deemed above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limits of quantitation necessary to accurately and precisely measure the analyte in the sample.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a “tentative identification.”
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and to meet the quality control criteria. The presence or absence of the analyte cannot be verified.
